

PRISON CLEAN UP

System Hygienics, the UK's leading air hygiene specialist, recently completed a large-scale cleaning contract at HM Prison Doncaster to improve the cleanliness and efficiency of the prison's ventilation system.

Prisons operate strict security measures to ensure the safety of their staff and are required to vet all contractors thoroughly. System Hygienics was chosen by Serco, the managing agent for Doncaster Prison, because of its impressive portfolio of prison ductwork cleaning contracts including HMP Hull, HMP Parkhurst and HMP Wolds.

The contract involved cleaning the ductwork in six areas of Doncaster Prison initially including the three house blocks, entry building, staff offices, visiting area, kitchens and internal services. The managing agent for Doncaster Prison, was so impressed with the company's efficiency and professionalism that System Hygienics' engineers were called back to complete further cleaning of the prison's 65-bed healthcare centre, gymnasium and segregation unit.

System Hygienics' JetVent system cleaned the ventilation ductwork with negligible disruption to the day-to-day running of the prison. Minimal access to the ductwork was required, as up to 50 metres can be reached from one point. Before and after photos and a certificate of cleanliness was provided to verify that cleaning was achieved to the Heating and Ventilating Contractors' Association's TR/19 standards.

Water costs less at HMP PARC's new wing

Water is an expensive resource to use and not just to buy; heating, moving and disposal is also expensive. Add this to the environmental costs and potential for damage and reducing use of water becomes a real priority.

Water control is not just desirable, it's essential and never more so than in a prison where the occupants will have less regard for these issues than most. This is where the integrated systems that Wallgate® has developed come into their own. In the 320 new cells being built at HMP PARC they are installing the WD200 control systems. These are a range of fully-programmable electronic controls that provide for the total control of all the water services, including automatic lock-outs and UNIQUE timed activation to control use of showers and schedule use. They also control dual-flush, remote flushing, maintenance/ hygiene flushing etc. The range is capable of being linked using a standalone network or they can be fully integrated into the building management system, where they are installed to work with Wallgate's 'safer cell' and damage-resistant sanitary ware.

Buchan
CONCRETE SOLUTIONS

Excellence in Precast Concrete Offsite construction for secure accommodation

Dovegate Prison, Staffordshire

The Cost Effective Total Solution

- High Quality, Innovative, Robust and Sustainable
- Full Design, Manufacture and Installation Service
- M&E integrated within walls and floors
- Erected in a fraction of the time of traditional methods of build.

As part of the Roger Bullivant Group we can now offer a full package for sub and super structure
